About Me

A Frontend Software Engineer with more than five years of professional experience solving problems and building scalable and pixel perfect web, mobile, and desktop applications using React, React Native, TypeScript, and Electron. Throughout my career, I have collaborated with international remote teams, delivering responsive user interfaces, reusable component libraries, API integrations, and cross-platform solutions. I have experience about writing clean, maintainable code, improving application performance, and contributing to collaborative development environments through code reviews, documentation, and mentoring in order to improve the user experience. Alongside my industry experience, I am pursuing a Master's degree in Artificial Intelligence, where my research focuses on applying deep learning and reinforcement learning to build intelligent decision-making systems. With a strong foundation in both software engineering and AI, I enjoy solving complex technical challenges.

Worked with

- | | | | |
|---|--|--------------------------|--------------------------|
| (1) Programming Languages | ▪ JavaScript, TypeScript, Python | (7) DB solutions | ▪ WordPress |
| (2) Front-end technologies | ▪ HTML5, CSS3, SASS, MUI, Tailwind | (8) API paradigms | ▪ Realm |
| | ▪ React, Next.js | | ▪ REST, GraphQL |
| (3) Cross Platform Apps: | ▪ React-Native and Expo (on both Android, iOS) | (9) AI related | ▪ Web sockets |
| | ▪ Flutter | | ▪ GRU |
| | ▪ Electron (Windows, MacOS) | | ▪ AI training |
| (4) State Managements Strategies | ▪ Redux, Context | | ▪ Data preprocessing |
| (5) ALM | ▪ Version Control: GitOps | | ▪ Reinforcement learning |
| | ▪ Postman | | ▪ Autoencoder |
| | ▪ Jira, Trello, Figma | | ▪ XAI: SHAP |
| | ▪ Docker | (10) Tests | ▪ Prompt engineering |
| (6) CMS | ▪ Strapi | | ▪ Pytorch, Numpy, Plot |
| | | | ▪ Jest (unit test) |
| | | | ▪ Playwright (E2E test) |

Education

10/2023 - Present

Department of Computer Engineering | Master of Artificial Intelligence

Tehran Central Branch, Azad University

I have worked with NN in university projects like for [fake news detection](#) and also as part of my master's thesis, I am working on improving the decision-making process using deep reinforcement learning to reduce developer churn in open-source projects using python. In this work, I use a GRU model to first predict which developers are likely to churn and then use this model to create a simulated environment for training the reinforcement learning model. Additionally, an autoencoder and SHAP are used to improve feature extraction.

10/2017 - 12/2021

Department of Computer Engineering | Bachelor of Computer Engineering (Software)

Tehran Central Branch, Azad University

As part of my university project, I have worked with [nodejs](#), react native projects like: [Ketabkhan](#), [AudioVideo player](#), [ManageMe](#), and flutter projects like: [GraphView](#) where I applied creativity alongside problem-solving and software development skills.

Professional Experiences

10/2025 - 02/2026

Italy (Full Remote)

[The recommendation](#)

Front-end developer

[Mypethub](#)

Mypethub was a project that I started building its web app from scratch. I was the only member of the front-end development team.

- Developed over 20 responsive, detail-oriented and pixel perfect pages included authentication and dashboard pages using Typescript.
- Created more than 50 platform specific React Components and React Server Components for reusing in different parts of the project.
- Connected more than 20 APIs and data types for server side.
- Designed API schemas to support more than 20 different functional areas of the application.
- Developed more than 10 customized and multi-layer forms using react-hook-form.
- Created more than 5 customized hooks for generalizing the different functionalities and also in order to have a clean code.
- Creating 3 data tables with pagination in the dashboard of the users using the data coming from the APIs in order to simplify the readability.

08/2022 - 08/2023

Front-end developer

Australia (Full Remote)

[Uniplato \(Coffee project\)](#)

[The recommendation](#)

Uniplato is a team consisting of more than 15 members developing the "Coffee" platform, a meeting platform for scheduling and managing meetings with individuals or groups of people.

- Upgraded the "**Coffee**" platform by refactoring the old code structures of 2 old modules which consists of Search module, and bringing the modules back to the project.
- Enhanced platform stability by conducting more than 5 code reviews for new team members.
- Strengthened the codebase by developing over 15 pixel-perfect, responsive and well-structured **React** components, making the components accessible to all team members across all the modules as part of the project design system.
- Delivered over 10 new features, complete with demos, to the platform through collaborative communication with team members and the adept utilization of **REST** API and **web sockets**.
- Directed the Mac desktop app functionalities, prioritizing features and managing development to align with user needs and business objectives.
- Collaborated with the new/junior team members to tackle challenges and overcome obstacles besides working independence in each task.
- Lead about 2 developers in different parts of the owned modules (search module, desktop apps, etc)
- Improved more than 2 tooling issues (like removing old modules, reimplementing heavy libraries, etc) in the project.

12/2021 - 08/2022

Front-end developer

Russia (Full Remote)

[Comfortel](#)

[The recommendation](#)

Comfortel is an Internet service provider company the team consists of over 15 members developing the "**Techpal**" project which consists of different platforms: Inkpal, Chatpal, and Gitpal.

- Improved team communication by establishing customization throughout the Mattermost platform for a consistent experience on desktop (Windows OS and Mac OS) via Electron and mobile on Android operating system.
- Enhanced the usability of the "Techpal" platform by releasing the desktop application on three operating systems (Windows, mac, and Linux) using Electron.
- Enhanced the usability of the "Techpal" platform by releasing the Android and iOS application using React-Native.
- Created more than 10 pages and implemented more than 15 features for a mobile application using Flutter (Android).
- Documented the codes, making sure that offers clear explanations for other programmers to understand the created features.

11/2020 - 12/2021

Front-end Developer

Iran

Eaglet, [Myplayer](#)

MyPlayer is an open-source **React Native** project, serving as an audio/video provider platform. This platform utilizes **Strapi** as the CMS and available on both **iOS** and **Android** OS.

- Developed more than 10 reusable, customized and pixel perfect components in order to be used in different areas of the app.
- Implemented the backend side of the app and making more than 10 APIs using Strapi.
- Created features like: application notifications, light/dark theme switching, profile editing, authentication, music player, storing files/paths inside the internal storage, bookmarking, different kinds of navigation between pages (tabs, menu bar, ...), onboarding pages, searching, animated, etc.
- Performance improvement using key techniques in react native components, like caching data.
- Migrating more than 30 class components to functional components for performance improvement and having clean code.
- Customized app icon for both Android and iOS platforms.
- Customized splash screen for both Android and iOS platforms.
- Transitioned from class-base structures to functional ones, to harness the power of hooks. This transformation let to a remarkable performance enhancement particularly noticeable on older **Android** devices.
- Refactored old code structure that resulted in removing 3 useless and extra packages from the project and reduced the bundle size.

11/2019 - 11/2020

Front-end developer

Iran

Bytino

- Improved team's portfolio resulting in the acquisition of 2 new projects by creating one-page websites that showcased the team capability.
- Created 2 web pages templates that have the potential to expedite project implementation.
- Resized businesses customers by 10% with creating web pages using **WordPress**.
